8	M+	15	16	v4–15
YEARS	DAILY USERS, NSEINDIA.COM	PEOPLE LED	SERVER LOCATIONS	ANGULAR VERSIONS

8 years building web platforms. Built the **NSEIndia.com** revamp — India's stock exchange, millions of visitors a day — and led the team of 15 that shipped it. **MEAN stack** by trade, Angular is home. Fintech throughout. Build AI systems in Python on the side.

// experience

Work

Senior Software Engineer
[aug 2023 – now · 3 yrs]

Volofin · Singapore trade-finance NBFC · Mumbai

- Building the backoffice for a cross-border trade-finance lender. Angular 15.
- Shipped **3 modules** end to end — Sales, Credit, Insurance Underwriting.
- Self-initiated a native **iOS proof-of-concept** — Swift/SwiftUI against live production APIs, multi-tenant account switching, financial dashboards. No prior mobile roadmap existed; wrote and got leadership sign-off on the platform strategy proposal.
- Work straight with department heads. No one in between.
- *Payroll moved from sister company Aston Processors in Apr 2026. Same product throughout.*

Associate System Analyst
[dec 2021 – aug 2023]

NSEIT · National Stock Exchange of India · Mumbai

- Architected the **NSEIndia.com** revamp. Live rates, charts, corporate actions, F&O bhavcopy. Node, MongoDB, Cassandra.
- Led **15 people** — 10 devs, 3 QA, 2 BAs. Worked directly with the CEO and CTO.
- Real-time trading data into MongoDB. Replica sets. **16 server locations**, main and backup.
- Compliance with **SEBI, RBI and the Ministry of Finance**.

Software Engineer
[apr 2020 – dec 2021]

Hurix Digital · US K-5 ed-tech · Mumbai

- Led **5 frontend devs** on Reading Ranger, a US learning app. Angular 8, WebGL animation.
- Built the reading activities and **4 mini-games**. Owned delivery and the daily client call.

Front End Engineer
[oct 2018 – apr 2020]

Superwise · construction project-management SaaS · Mumbai

- Moved the product off **.NET MVC onto Angular** + PrimeNG.
- Angular **5 → 7 → 8**, while shipping billing features on the same codebase.

// side projects

Things I've Built

Jarvis `Python · FastAPI`

An AI assistant that runs on my own machines. Give it a goal — it splits the goal into tasks and runs them. Asks before anything destructive. Saves state at every step, so a crash loses no work. Machines join by dialling out, so no open ports. **176 tests.**

Document Sorter `Node.js · offline OCR`

Drop in a pile of invoices and POs. It works out what each one is, pulls the company, date, amount and number, then groups the related ones. Scanned files go through **OCR that runs fully offline** — nothing leaves the machine.

Saloni Collection `Supabase · Postgres`

A full e-commerce platform — catalog, cart, checkout, order management, admin panel. UPI and cash on delivery. Per-role access rules in the database. Built and feature-complete; soft launch pending inventory.

Crypto Signal Engine `Python · ML · Docker`

Watches crypto markets live off Binance and CoinDCX. Runs **5 signal checks** — RSI divergence, volume spikes, Bollinger squeeze, news sentiment, and confluence when several agree. Every signal goes into a **paper-trading simulator** that tracks whether it would have won or lost, and an **ML model retrains on that history every 6 hours**. No real money — it's a research system.

// skills

Stack

front:	Angular 4→15 · TypeScript · RxJS · NgRx · SCSS · React
mobile:	Swift · SwiftUI
back:	Node.js · Express · NestJS · Python · FastAPI · REST
data:	MongoDB · Cassandra · PostgreSQL · MySQL · Redis
ai:	AI Agents · LangChain · RAG · OpenAI · Anthropic · Embeddings
infra:	AWS · Docker · CI/CD · Nginx · Linux
other:	System Design · Team Lead · Agile

// education

Education

Master in Management Studies
RPIMS College, University of Mumbai
[2022 – 2024]

B.Sc. Computer Science
Shankar Narayan College, University of Mumbai
[2014 – 2017]
