Dhruv Parekh

Senior Full Stack Engineer (MEAN Stack) — Angular, Node.js, MongoDB, TypeScript | Generative AI (GenAI): LangChain, RAG, LLM, Python

Mumbai, India | dhruvparekh.dp@gmail.com | +91 72084 50706 | https://dhruvparekh.in | https://linkedin.com/in/dhruvparekhdp | https://github.com/dhruvparekhdp

Total Experience: 8 Years | Notice Period: 30 Days

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 8 years of experience building enterprise web applications at scale across fintech, capital markets, BFSI, and EdTech. Core expertise in the MEAN Stack — Angular (versions 4 through 15), Node.js, Express.js, and MongoDB — with TypeScript, RxJS, and NgRx, plus production experience with Cassandra and PostgreSQL. Architected the revamped NSEIndia.com, the National Stock Exchange of India public platform serving millions of daily visitors, and led a 15-person cross-functional team while working directly with the CEO, CTO, and regulators including SEBI and RBI. Builds Generative AI (GenAI) and distributed systems in Python, including a multi-agent orchestration platform with capability-based permissions, durable execution, and a distributed node fleet, plus an offline document intelligence pipeline for financial records. Comfortable across TypeScript and Python, from browser to scheduler.

CORE SKILLS

Frontend: Angular (4 to 15), TypeScript, JavaScript (ES6+), RxJS, NgRx, HTML5, CSS3, SCSS, Angular Material, PrimeNG, Bootstrap, React, Single Page Applications (SPA), Server-Side Rendering (SSR), Micro Frontends, Responsive Web Design

Mobile: iOS Development, Swift, SwiftUI, Native App Development

Backend: Node.js, Express.js, NestJS, Python, FastAPI, REST API design, MEAN Stack, Full Stack Development, Microservices, Event-Driven Architecture, WebSockets, Server-Side Rendering

Databases: MongoDB, Mongoose, MongoDB Replica Sets, Apache Cassandra, PostgreSQL, MySQL, Redis, SQLAlchemy, Supabase, Firebase, Database Design, Data Modeling

Generative AI / Machine Learning: Multi-Agent Systems, AI Agents / Agentic AI, Agent Orchestration, LangChain, Retrieval-Augmented Generation (RAG), Large Language Models (LLM), Generative AI (GenAI), Vector Databases (Pinecone, ChromaDB), Embeddings, Semantic Search, Hybrid Retrieval, OpenAI API, Anthropic Claude API, Groq, Google Gemini, Hugging Face, Ollama, Prompt Engineering, LLM Fine-Tuning, Python

Cloud & DevOps: Amazon Web Services (AWS) EC2 and S3, Docker, Continuous Integration and Continuous Deployment (CI/CD), GitHub Actions, Nginx, Linux, Git, Netlify, High Availability, Load Balancing

Architecture & Practices: System Design, Frontend Architecture, Scalable Web Architecture, SOLID Principles, Design Patterns, Angular Version Upgrade and Legacy Migration, Internationalization (i18n), Data Visualization (Chart.js), Real-Time Data Pipelines, Agile / Scrum, Team Leadership and Mentoring, Stakeholder Management, Regulatory Compliance (SEBI, RBI)

Domain: Fintech, BFSI, Capital Markets, Stock Exchange, NBFC, Trade Finance, Invoice Discounting, E-commerce, EdTech, SaaS

WORK EXPERIENCE

Senior Software Engineer

Volofin — Singapore-based trade finance NBFC, Mumbai

Aug 2023 – Present (3 years) | Payroll via sister company Aston Processors until Apr 2026; same product and team throughout

- Building the enterprise backoffice platform for a global import/export financing and invoice discounting NBFC using Angular 15, Angular Material, and TypeScript.
- Delivered 3 core business modules — Sales, Credit, and Insurance Underwriting — from requirements analysis through development to stakeholder sign-off.
- Self-initiated and built a native iOS proof of concept for the supplier finance platform (Swift, SwiftUI) against live production APIs, including authentication, multi-tenant account switching, and financial dashboards. No prior mobile roadmap existed at the company; authored a platform strategy proposal (native versus hybrid, infrastructure requirements) that was approved by leadership.
- Partner directly with Heads of Department and the UX designer on module analysis, planning, and sign-off across the full delivery cycle.
- Work on a regulated cross-border fintech product where correctness of financial calculation and audit trail is business critical.

Associate System Analyst (Full Stack / Team Lead)

NSEIT — National Stock Exchange of India project, Mumbai

Dec 2021 – Aug 2023

- Architected the revamped NSEIndia.com — the National Stock Exchange of India public platform serving millions of daily visitors with live market rates, charts, corporate actions, historic data, and Futures and Options bhavcopy — built on Node.js, Express.js, EJS, Chart.js, MongoDB, and Apache Cassandra.
- Led a 15-person cross-functional team (10 developers, 3 QA testers, 2 business analysts), working directly with the CEO and CTO.

- Built real-time data pipelines: file-reader services streaming live trading data files into MongoDB, with MongoDB replica sets for high availability.
- Architected a hybrid Amazon Web Services (AWS) and in-house server infrastructure across 16 locations in India, including main and backup sites.
- Implemented multilingual support (internationalization / i18n) and handled regulatory compliance and grievance redressal workflows with SEBI, RBI, and the Ministry of Finance.

Software Engineer
Hurix Digital — US K-5 EdTech product (Reading Ranger), Mumbai
Apr 2020 – Dec 2021

- Led a team of 5 frontend developers on Reading Ranger, a US-based K-5 e-learning product built on Angular 8 with Spine WebGL animation and audio SFX.
- Defined the API structure and coordinated server-side rendering (SSR) between backend and client-side teams.
- Shipped a catalog of reading and listening activities plus 4 interactive mini-games; owned the delivery cycle and daily client status reporting.

Front End Engineer
Superwise — construction project management SaaS, Mumbai
Oct 2018 – Apr 2020

- Migrated an enterprise SaaS product (project costing and delivery tracking to the lowest task level) from .NET MVC with Kendo UI to Angular with PrimeNG.
- Built new billing features and an Excel-like HandsOnTable grid with copy-paste editing.
- Executed Angular version upgrades from 5 to 7 to 8 while shipping new features on the same codebase.

PERSONAL ENGINEERING PROJECTS

Jarvis — Multi-Agent AI Platform (Python, FastAPI, PostgreSQL)
AI assistant that takes a goal, splits it into tasks and runs them. Asks for approval before anything destructive. Saves state at every step, so a crash loses no work. Machines join the fleet by connecting outward over WebSocket, so no inbound ports are needed. Includes semantic search over stored data using embeddings, and dataset export for Large Language Model (LLM) fine-tuning. 176 automated tests, run against both SQLite and PostgreSQL. Open source: github.com/dhruvparekhdp/dhruv-ai

Document Sorter (Node.js, Express, Offline OCR)
Classifies financial PDFs — invoices, purchase orders, receipts — and extracts company, address, date, amount and reference number, then groups related documents together. Scanned files run through Optical Character Recognition (OCR) that works fully offline, so no document data leaves the machine. Document types and fields are configured in one JSON file, so a new client needs no code change.

Saloni Collection — E-commerce Platform (Supabase, PostgreSQL)
Full e-commerce platform — product catalog, shopping cart, checkout, order management and an admin panel with login. Payments by UPI and Cash on Delivery. Row-level security (RLS) policies in the database control what each role can read and write. Built and feature-complete; soft launch pending inventory and supply chain setup.

Crypto Market Signal Engine (Python, Machine Learning, Docker)
Real-time cryptocurrency market analysis system ingesting live data from Binance WebSocket, CoinDCX and CoinGecko. Runs five independent signal detectors — RSI divergence, volume spike, Bollinger band squeeze, news sentiment shift, and a confluence detector requiring agreement across indicator families — with technical indicator calculation, order book analysis, cooldown deduplication and contradiction rejection. Signals feed a paper trading simulator (simulated only, no live capital) with trailing stops and laddered exits; outcomes are logged so a machine learning model retrains on historical signal performance every six hours. Includes a backtesting framework and signal audit reporting. Runs 24/7 on APScheduler with PostgreSQL and SQLAlchemy, containerised with Docker.

EDUCATION

Master in Management Studies (MMS) — RPIMS College, University of Mumbai (2022 – 2024)

Bachelor of Science in Computer Science (B.Sc. CS) — Shankar Narayan College, University of Mumbai (2014 – 2017)
